

Multi-functional 2D Keyboard Controller

Description

The PIH-932T is a keyboard controller for a range of matrix switchers, dome cameras, DVR and telemetry receivers. It allows operation of all the functions of equipment and provides a simple operator interface. When matrix is present in the system, up to 8 keyboards can be used. However, one of the keyboards must always be configured as the Master, having greater access to settings than the slaves. Data is transmitted via screened, twisted pair cables, usually in serial configuration. (RS-485)
